DESIGN STYLE LIBRARY FOR CORRUGATED BOARD PRODUCTS

FEFCO Corrugated Packaging

The FEFCO code is the internationally recognised system for the classification of corrugated board packaging designs. It contains designs of the most common box types with a code number attached to each design, simplifying the identification process.

PUBLISHED BY FEFCO

INTERACTIVE PDF

The digital version of this document has interactive links to help locate the right design quickly. Use the table of contents to get to each code series, by clicking the miniature image (s) in the overview.

The small Fefco logo on each page will lead back to the content page. The number in the top right corner will lead back to the code overview.

FEFCO Code – Design style library for corrugated board products

The first Code was developed in the 1960's by FEFCO and ESBO (formerly ASSCO) as a numerical code system for corrugated boxes to avoid confusion when communicating in different languages. This is the 12th edition of the Code, extended with new developments.

As corrugated boxes continuously develop it is impossible to describe all of them in this catalogue. Other styles, together with custom designs to meet specific requirements, are always possible.

References to this Code may be used in orders, specifications or publications. Any additions or modifications are allowed only though FEFCO.

SYMBOLS USED IN DRAWINGS AND COMPUTER SYSTEMS

DRAWING SYMBOL CUTS, SCORES, SLITS ETC.	DESCRIPTION
	contours of erected cases or cutting lines of case blanks
	crease lines
	partial cut lines
	perforation lines
	tape lines
	tearaway lines

CASE DIMENSIONS

All dimensions are expressed as internal dimensions in mm as follows:

Length (L) x Width (W) x Height (H)

Length (L): Longer dimension at the opening
Width (W): Shorter dimension at the opening
Height (H): Dimension from the top of the opening to the base
Variable (v): A variable dimension defined by the design attributes

The dimensions L, W, H and v are specified in each description of the case construction, for some designs the numerical value of W can exceed the numerical value of L. Dimensions should be measured under standard climatic conditions (23°C and 50 % RH according to the standard EN 20187), on the flat blank from the centre of crease bearing the thickness of the material in mind.

For cases with overlapping outer flaps the length of the area of overlapping (o) should be given as a fourth measurement after an oblique stroke, i.e.

355 x 205 x 120/40 mm
(L) (W) (H) (o)

SHEET DIMENSIONS

Unless otherwise specified, the dimensions of a corrugated sheet are expressed in mm as follows:

1st dimension x 2nd dimension
1st dimension - along the flute glue lines
2nd dimension - across the flute glue lines

STYLE VERSIONS

Several case types may have derived versions without the necessity to create a new style. In this case a suffix should be added to the basic style number, separated by a dot.

Example: **0201.2**
A version may be unique to individual manufacturers.

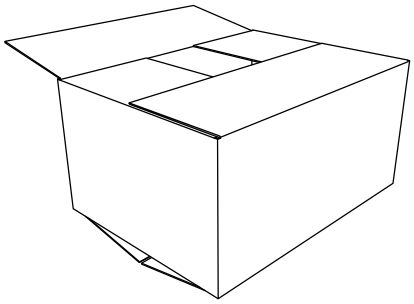

© 2022, 12th Edition - All rights reserved.

STYLES AND THE MANUFACTURERS JOINT

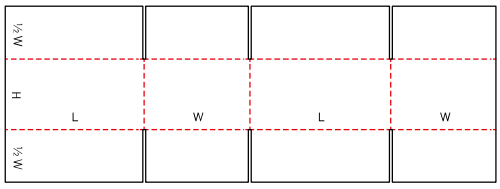

The drawing style layouts as shown in this Code may need to be rearranged depending on the manufacturer's chosen joint. Some styles may have a manufacturer's joint which may be glued, stitched or taped. A glued or stitched joint may have an extension to either the short or the long panel. The standard suffix can be added to the code name to determine "G" for glued and "S" for stitched box, e.g. 0201-G.

Panel configurations may be visualized in alternate ways to suit manufacturing capability. Jointing seams may be positioned on the left or right hand side of any style, which may be a long or short panel. Any jointing panel may be extended above and/or below the standard depth configuration of a jointed style.

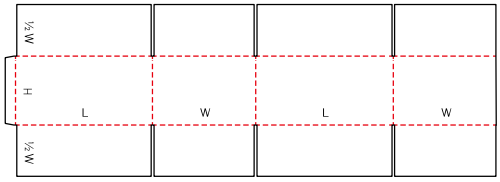

Example: **0201**

Taped joint

Glued or stitched joint

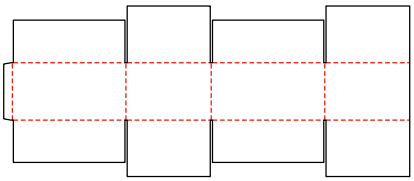

This applies to all designs in this Code.

COMBINATIONS OF STYLES

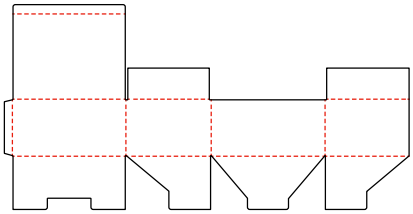

The construction styles shown are of the basic types of corrugated cases. If the ultimate construction is a combination of two or three basic models, e.g. flap arrangements, they may also be described as follows:

Top flaps as 0204, Bottom flaps as 0215

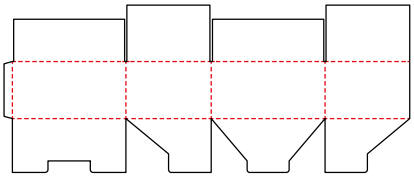

0204

0215

0204/0215

This type may also be described as 0204/0215 (Top flaps/Bottom flaps).

MANUAL OR AUTOMATED ERECTION

Each design style includes one of the following indications:

M: usually manual erection
A: usually automated erection
M/A: can be either manual or automated erection

These indications are based on current practice and are intended to give additional information for specifications and users. Some manually erected cases can be closed automatically (e.g: 0216 or 0712).

© 2022, 12th Edition - All rights reserved.

Description of the basic style series

THE TERMS BOX, CONTAINER AND CASE ARE INTERCHANGEABLE

GENERAL REMARK

Please note, that several case designs contained in the Code under a specific number could also be classified under other basic style series.

01 - Commercial rolls and sheets

02 - Slotted boxes
Slotted boxes consist of basically one piece with a glued, stitched or taped manufacturers joint and top and bottom flaps. They are shipped flat, ready to use and require closing using the flaps provided.

03 - Telescopic boxes
Telescopic boxes usually consist of more than one piece (e.g. top and bottom) and they fit over each other.

04 - Folder boxes and trays
Folder boxes and trays are usually made from one piece of board. The bottom of the box is hinged to form two or all side walls and the cover. Locking tabs, handles, display panels, etc. can be incorporated in some designs.

05 - Slide boxes
Slide boxes consist of several pieces of liners and sleeves sliding in different directions into each other. This group also includes outside sleeves for other cases.

06 - Rigid boxes
Rigid boxes consist of two separate end pieces and a body that require stitching or a similar operation before they can be used.

07 - Ready-glued cases
Ready-glued cases consist of basically one piece, are shipped flat and ready to use by simple assembly.

08 - Retail and e-commerce packaging
Retail and e-commerce packaging category shows the typical styles used for Point of Sale (POS) displays and trays as well as styles for the online trade.

09 - Interior fitments
Interior fitments such as inside liners, pads, partitions, dividers, etc. whether integrated in the box design or as separate items. Any shown number of panels is arbitrary and may be increased or decreased as required.

WRITING OF THE STYLE CODE

FULL CODE: XXXX.XXXX

STYLE XXXX	STYLE VERSION .XXXX
The standard recognised shape/design from this code.	The version number to differentiate the variation from the standard design (corresponding to an individual drawing or CAD/CAM library).

© 2022, 12th Edition - All rights reserved.

Closure of boxes

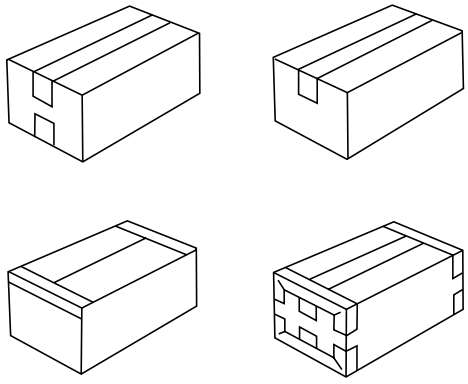

Correct and effective closure of the packaging is as important as the packaging construction itself.

The following methods of closures are possible either singly or in combination:

- by gluing, cold or hot
- by taping
- by interlocking
- by stitching

CLOSING BY TAPING

This can be done according to the examples shown.

CLOSING BY STITCHING

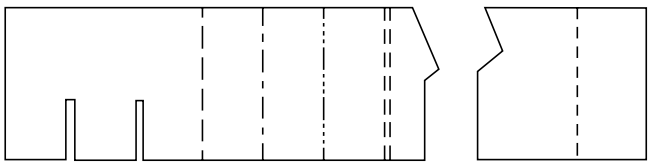

This can be done according to the examples shown.

Coding of interior fitments

The following range of interior fitments can be coded depending on the number of panels used, in any combination of shapes (for computer systems).
